- A. Write a brief narrative of work accomplished. Compare actual accomplishments to objectives established as indicated in the work plan. When the output can be quantified, a computation of cost per unit is required when useful.**

Field surveys were conducted for three CAPS primary target pests: cucurbit beetle (*Diabrotica speciosa*), maritime garden snail (*Cernuella virgata*), and yellow witchweed (*Alectra vogelii*). Visual survey is the approved method for all three target pests. Survey efforts were conducted in meadows (primarily alfalfa, though some red clover fields were also surveyed). 50 fields were proposed in the work plan; 433 field observations were made. Additional information was collected along with the CAPS target observations, increasing the efficiency of the state’s plant protection work.
