Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Sue Haake

Dear Trade and Consumer Protection,

I feel strongly that any big business needs to be regulated and monitored for the welfare and safety for the public. These farms are no different, perhaps even more important because of the possible impact to the environment. Local citizens and government need a voice and protection!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. Dear Trade and Consumer Protection,

My home in Kewaunee Co. has not had drinkable water since the fields began to be fertilized with liquid manure from the CAFOs. I live on top of the Niagara Escarpment where the topsoil is very close to bedrock. These factory farms only benefit a few families, while ruining the water for many and contributing to the decline in the number of smaller family farms.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Dee Costello

Dear Trade and Consumer Protection,

I agree, animal raising should post bonds to ensure that local governments don't end up cleaning up animal catastrophes, including deaths by fire, flooding, disease or other issue. The companies have to ensure they have enough cash flow to care for their animals in emergency situations. They MYST have insurance to cover their losses.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Dear Trade and Consumer Protection,

There are already far too many people who have to drink bottled water because their water is polluted. How about the livestock, pets and poultry who are drinking the same polluted water? In some cases we may even be eating those animals, certainly not healthy either.

Those big CAFOS must stop that runoff into streams or our groundwater.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

My sisters and I own the rural property we inherited in Kewaunee County. This property has been in our family for well over a 100 years. Some of the property that we used to own is touching some of our remaining property. This property is being sprayed with liquid manure from the CAFO farms. In the afternoons or early morning hours countless liquid manure trucks are carrying the manure to unknown places. The trucks come one by one with maybe 30 seconds in between. You can tell the land that has been sprayed by this manure as there is a whitish/gray tint to the soil. Gone are the days where one was always able to see cows grazing in the pasture. Now one sees these monstrous buildings that often look like the Amazon distribution center. These have no place in a bucolic countryside. Many wells have been contaminated in Kewaunee County. This was never a worry growing up and now we had to pay to have it inspected. Above all this practice disrespects the animals that are forced to live this way. There is no way this is a sustainable practice let alone a humane one.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

When I practiced as an occupational and environmental medicine physician, I occasionally dealt with individuals with airway and odor irritant issues from H<sub>2</sub>S and mercaptans as well as mists and particulates. Property values, especially for rural non farmers plummet in the face of concentrated odors. The horse is already out of the barn when it comes to coliform and nitrate pollution. Laws need to be in place to not further degrade ground water and environmental quality. Yes CAFO's may be more efficient but they are displacing the independent family farmer for the sake of corporate or large family corporate entities. I especially support bonding as I look at CAFO's as an extractive industry. Historically, extractive industries have done their thing until things get financially tough and then they declare bankruptcy and clear out leaving Superfund sites, brownfields, and other detritus that society then has to deal with

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

This is a real message from people who vote. We love the long history of protection of natural resources that Wisconsin has, and we are very concerned about the loss of regulations on air and water quality. Greed has had the upper hand in Wisconsin for too long now. Please help us return to planning for the long range health of land and people.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

I am concerned for the state, my neighbors and my own family's health.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Kendall Banks

**Categories:** Green Category

Dear Trade and Consumer Protection,

I know that local communities, such as Kewanee County, have had significant issues with water contamination from farm animals. If animals are going to be kept in HUGE herds, you need the equivalent of a sewage treatment plant. "Undoing" the environmental damage, once it is done, is a monumental task. It is much smarter to set common sense regulations to avoid contamination and keep our water supply safe.

Thank you for listening to my concerns.

Sincerely,

Karen Brown-Schaible

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Dear Trade and Consumer Protection,

The future of agriculture is NOT to be found in Industrialisation and "mass feeding" (of what products? from what gigantic company that is not interested in animals or people, but only profits?!)

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Dear Trade and Consumer Protection,

Clean land and water is incredibly important, not only for myself but for my child! Please help to protect the natural beauty and healthy waters of WI

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Dear Trade and Consumer Protection,

Our nephew runs a dairy farm and is very discouraged by all the problems that are being created for them by large corporate farming.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

I am very worried about CAFOs and water. The regulations should guarantee that the water on land surrounding a CAFO will not be polluted. Neighbors should be able to have clean water.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. Dear Trade and Consumer Protection,

I have been personally impacted by this issue. A few years ago my well was contaminated with manure and we had to dig a new well. The field adjacent to my property is owned by a CAFO and they spread more than the allowed amount just before a heavy rain. This happens often in the area where I live because they self regulate. I also checked to see if their permits were up to date and they weren't at the time. I have spoken with people from the DNR and they are just as distraught as I am about this issue and understand that it all comes down to legislation in the end. I have an autoimmune disease and at the time I was taking immunosuppressants which compromised my immune system during the exposure. When manure is spread in the area where I live the ammonia makes my asthma flare up as well. I know I am not the only one that has been affected in these negative ways. Please help.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. Dear Trade and Consumer Protection,

I lived not more than a mile away from a CAFO in Malone, WI. At that time neighbors signed petitions and went to hearings and to court but they were not successful in stopping the CAFO. The CAFO continued and finally they were pressured into putting in a manure digester. Then there was a manure spill which went down a stream into Lake Winnebago, killing many fish and creating an algae problem in the lake. I have since moved but I know how much regulations are needed for factory farms. Please do all you can to pass stronger requirements on CAFOs. All people are affected when we don't have clean water and air and the soil is saturated with nitrogen from the manure spreading.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay

to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Dear Trade and Consumer Protection,

ATCP 51 revisions will help protect Wisconsinites from some the impacts of CAFOs on our land, water, and health. I support strong and more robust updates to the Livestock Siting Law, including increased inspection and stronger local requirements--but they could be even stronger. Replacing the previous system of determining how far a manure storage facility or barn needs to be from neighboring properties is an improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact practices. Setbacks need to be much larger, neighbors within two miles of the facilities should be notified, and local governments need to be allowed to require additional setbacks if they deem necessary.

Operators should be required to adhere to stronger pollution plans by listing owned, rented and contracted acres (along with signed rental contracts) where they plan to spread manure; and facility expansions should require full review. Additionally, local governments should be allowed to secure financial assurance, like increased permitting fees with a bond as part of the process to ensure governments aren't covering the costs and mess if CAFOs go bankrupt or something happens--and something ALWAYS happens.

Our people and natural resources are precious and deserve every protection possible from the negative impacts of these 'farms.'

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

We need stronger regulations to prevent factory farms from spreading excess manure and ruining aquifers and watersheds!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. Dear Trade and Consumer Protection,

I am concerned about the animal abuse and environmental degradation inherent in a CAFO. It isn't natural for cows to be crowded in feed lots. Also, waste accumulates rapidly from so many cows which compromises our clean air and water standards.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

Dear Trade and Consumer Protection,

I strongly support small family farms and smaller operations that don't create excessive amounts of waste that overloads land, water, neighbors and communities.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Dear Trade and Consumer Protection,

As smaller farms continue to go out of business, the farm size here in the state has gotten larger. CAFOs have not been sufficiently regulated up to now, and we need to make these changes for the health and safety of all Wisconsinites. Thank you.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Suzy Clarkson Holstein

**Categories:** Green Category

Dear Trade and Consumer Protection,

Every person has the right to clean and safe drinking water and I call on our legislature to make the necessary changes to the livestock facility rule revision ATCP 51.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 years or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Dear Trade and Consumer Protection,

I think it is paramount in the face of climate change and limited resources that we prioritize working with farmers to protect the environment and ensure the financial stability of local governments. This can be accomplished by allowing local governments to impose rules as they deem necessary, eliminating loopholes and exemptions from inspections, and creating a form of financial assurance to protect local governments as they protect the environment, people, and economy from CAFOs.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. Dear Trade and Consumer Protection,

In short, CAFOs must be better regulated to greatly lessen their destructive effects, and must be paid for by their owners, not by taxpayers.

The treatment of animals in these facilities must be closely monitored for abuse, neglect, and cruelty as well. Owners must understand that cruelty costs.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Dear Trade and Consumer Protection,

We need to continue to adapt our agriculture practices to a changing world. I support these adaptations that help factory farms continue to function while reducing their negative impact on the environment.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

Dear Trade and Consumer Protection,

Factory farms should be subject to very strict requirements for space for the animals so they are not cramped together like slaves on a slave ship and the chance to be outdoors (out of a building and on grass) for at least 4 hours per day.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

**From:** Chase Cummings <ccummings@co.pepin.wi.us>  
**Sent:** Friday, August 23, 2019 12:40 PM  
**To:** DATCP Livestock Siting Comments  
**Subject:** Pepin County Livestock Siting Rule Revision Comments

**Categories:** Green Category

Board of Agricultural, Trade and Consumer Protection:

On behalf of the Pepin County Land Conservation & Planning/Extension Committee, please accept the following comments regarding the proposed Livestock Facility Siting (ATCP 51) rule revisions.

Currently, Pepin County has not adopted Livestock Facility Siting rules either through countywide zoning or licensing ordinance. However, three of our townships have adopted their own ordinances consistent with the Livestock Facility Siting Rules (ATCP 51). With that said, Pepin County is exploring its administrative and regulatory options to address an increase in private well water contamination of nitrates. As Pepin County learns more about the Livestock Facility Siting statutes and rules, it is apparent that a county's authority to address these resource concerns are limited to the authorities that the state legislature has granted to it. While we understand the intent of the Livestock Facility Siting Law was to provide uniform expectations for all parties involved for the siting of a livestock facility across the state, it is with frustration that Pepin County and other counties are not able to address their resource concerns in a way that is unique and needed for their communities.

Nitrate contamination of groundwater is not caused by only livestock facilities, however, it appears that the statutes and rules have limited a County's authority to regulate only livestock facilities of a certain size. By implementing the tools statutorily available to counties, it does not appear that we, as a county and as a state, have been successful preventing contamination of our resources. In several ways it is viewed as a failure of our systems.

We understand and sympathize with the current economic hardships of agriculture in our state and particularly with our livestock facilities in our county. It appears that the system is failing them as well. We understand the considerations needed to balance a healthy agricultural economy and healthy water resources that serve all citizens. However, as we navigate our options to address a dire need for groundwater quality improvements, we support the proposed rule changes that increase the best management practices for water quality protection including related Natural Resources Conservation Service technical standards, as well as evaluating existing manure storage facilities for leakages and failures. We also have implementation concerns regarding the impacts to the local municipalities. As we evaluate adoption of a licensing ordinance, it is evident the challenges that our county must face to implement such a rule. The limit on permit fees are not adequate to cover the costs of implementation and administration and should be defined by the local community based on anticipated staff costs by farm size. The challenges associated with determining if a farm's animal units have increased above 20% are also a concern. While we feel there would be benefits to adopting this rule into local ordinance, having the capacity to do so is difficult and for some of our townships, may be impossible.

As we decide whether or not to adopt a livestock facility licensing ordinance, having a law that provides tools for local units of government to adequately implement the necessary standards to support safe groundwater, we encourage you to consider these comments in finalizing this rule.

Again on behalf of the Pepin County Land Conservation & Planning /Extension Committee, we appreciate your service and for the opportunity to provide comment.

Sincerely,

Chase Cummings  
Pepin County Land Conservation  
& Planning Director  
715-672-8665 ext. 5

Dear Trade and Consumer Protection,

We live near the Pinnacle CAFO and speak from experience and not just in the abstract. So please seriously consider our above comments. The future of Wisconsin is at stake.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Eva Kuzmanich

Dear Trade and Consumer Protection,

I have been a WI resident my entire life. I'm now retired and intend to remain in WI. I am now retired from work as a nutrition and health educator and value the quality of our natural resources. My grandparents and husbands family farmed their entire lives in WI. The WI landscape and quality of the natural resources will be forever changed due to CFOs and their negative impact on these resources. THEY NEED MORE REGULATION minimally as Sierra Club members have outlined. In addition NO MORE CFOs should be allowed in our beautiful state. Kudos to Sierra members and others who voice their concerns.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

I have lived in Wisconsin my whole life and the changes to WI farms is beyond sad and ridiculous. I do not buy food from these kinds of farms as the food is subpar quality and cruel production. We need to return to farming that produces quality food, is sustainable for our environment and respectful to the living creatures raised on the farms.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

I've lived in Wisconsin all my life, 66 years. I have always been proud of how we protected our natural resources, especially our water. Felt privileged and blessed to live in a state with so much clean water everywhere. It breaks my heart and angers me to know that so many of our lakes, streams, wetlands and rivers are now polluted or destroyed or threatened and that so many people now have tainted wells and lands. A big part of that picture is the rise and spread of CAFOs that have been mismanaged and poorly monitored by our legislators and delegated agencies to the extent we are now in crises. It's time we returned to the ways of comprehensive, conscientious stewardship of our lands and resources so our children and future generations can enjoy and benefit from a land of clean, clear waters just like I and all the other adults living here have. We shouldn't be robbing our children of a better future, we should be protecting and building a better future for them. And water - clean, clear healthy water - is a requirement for that future. I may not own or run a farm but I am a proud, caring, thankful lifetime citizen of this beautiful state and I care deeply about the damage CAFOs have done and continue to do. It's important to me that we change that and do a better job of managing large farming operations for the benefit and health of all citizens of this state.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is

being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Pam Fischer

Dear Trade and Consumer Protection,

I support the proposed rule changes to the Livestock Facility Siting Administrative Rule. Wisconsin's water quality has been seriously compromised in Kewaunee County, the Central Sands, and other parts of the state. My own region, the Lake Superior Basin, has been at risk. Adopting these new rules moves us toward the kind of standard I expect in our state.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. **Categories:** Green Category

Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Patti Gmeiner

Dear Trade and Consumer Protection,

Clean water, clean air and sustainable agriculture are requirements for a healthy future in Wisconsin!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Dear Trade and Consumer Protection,

CAFO livestock management comes with many societal costs that are usually not considered by the public. The large tracts of land, with monocropping, high manure concentrations, and required mechanical operations are very uninviting to wildlife of most sorts. With climate change in full swing, these massive operations will be very prone to weather stresses, with fewer means of adaptation due to their sizes. This leads to increased starvation risk of the public. These huge operations also do not support societal needs anywhere near as well as small, family-based farm operations. Protect our surface waters. Protect our drinking waters. Proactively protect our wildlife and surrounding nature. Protect the quality of the foods produced by our local farms.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Steve Deibele

Dear Trade and Consumer Protection,

It matters to me because I support humane treatment of animals, protecting our environment and because it is OUR responsibility!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. Dear Trade and Consumer Protection,

Allowing CAFOs to have their way is another example of allowing corporations to ride roughshod over us all.

Besides putting the small, traditional farmer out of business, CAFOs also pollute our water sources while they enjoy personal gain.

Their claim of providing jobs in no way offsets the health compromising pollution they create. Tell me, what value do you place on compromised health and the compromising of personal property water wells? I would be interested to know.

Lastly, go to the Menomonie, WI area and take a look at the water conditions in Lake Menomin and Tainter Lake. As we speak, they resemble pea soup. I don't think this blue green algae possesses any redeeming qualities.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

I support dismantling CAFO operations. As a former home owner and business owner in Kewaunee County who was forced to move when my health was affected by air quality related to livestock density and water quality, I advocate for

~Greater Property line and road setbacks from manure irrigation, manure storage and livestock barns ~ Management and training plans increasing transparency of practices ~ Better Odor management from lagoons and operation areas ~ Comprehensive Nutrient management which keeps pathogens on fields ~ Manure storage facilities which don't leak 500 gallons per acre per day ~ Runoff management that creates a fund for cleanups and larger fines

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Lisa Bey

Dear Trade and Consumer Protection,

From fish kills to contaminated wells, CAFOs and other big-ag farming practices are destroying Wisconsin's environment and driving traditional family farms out of existence. These practices are bad for human health and wildlife and do not support a healthy food supply. Unregulated businesses of any kind are not sustainable. Please rein in factory farms by implementing reasonable restrictions on them.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Dear Trade and Consumer Protection,

Factory farms need to be regulated and humane. I do not eat meat, but I know a lot of people who do eat it and will not stop. Animals, for their short lives, need to be treated with respect. People living in areas with these farms need to be protected from the pollution caused by these farms. We need full access to these farms to control how these animals are being treated. We need to know as the consumer. It is our right!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

Strengthening rules for factory farms matters to me because I value clean water. Water is life and there is a finite amount of water on earth. If we pollute the groundwater in any given area, it will take generations to restore it to usable drinking water. Rules to protect water are needed.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

Dear Trade and Consumer Protection,

Please protect the rights and health of Wisconsin residents and protect the environment. Please raise animals in a healthy environment and eliminate mass use of antibiotics.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Dear Trade and Consumer Protection,

Soon water will be our most valuable resource. No matter how long or short your legislative term is, jeopardizing such a resource is not an acceptable risk. We did fine for years without factory farms liquid waste. Smaller farms can handle solid waste, it's time for factory farms to do the same if they want to stay in business. We expect houseguests to respect our home, let's expect business to respect our natural environment. And respect other business like tourism in all it's forms, and to respect neighbors and their property values. I don't allow my compost pile to stink or put my stinky garbage next to my neighbors front door. I don't know of any benefit from Factory Farms that outweighs the damage they are doing to our state. Kevin in Neenah 54956

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. Dear Trade and Consumer Protection,

CAFOs are everything that is wrong with farming. The animals are treated very poorly. They are considered more like a crop than individual, feeling creatures. I remember visits to my father's cousin's farm and how each cow had a name and was treated as an individual. I believe that compassionate care should be factored into any farming operation involving animals.

CAFOs also wreak havoc on the soil, water and air in their vicinities, which happens to be a wide area due to manure runoff into close water bodies. There is no easy way to manage such large amounts of waste, and the people close by can not live with the poisoned groundwater and stench of these huge operations.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. Dear Trade and Consumer Protection,

This issue matters to me because CAFOs are very unsanitary and unhealthy for the animals, the consumers, and the people who live near them. There is nothing good about them and they should not be allowed to exist!!!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

our land water and health yes I would say that's important

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Bonnie Butts

Dear Trade and Consumer Protection,

I want safe food and the animals should be treated with respect.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Dear Trade and Consumer Protection,

This is important because people need clean air and clean water to be able to survive in good health. And unfortunately the size of these factory farms is so huge it puts these qualities at risk. We must remain strict and rules must be followed for these situations to work for both parties. People are not gonna want these farms around at all if they don't cooperate and fulfill their responsibilities.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

The biggest problem for CAFOs besides the smell is the lack of good waste methods. Too often the waste ends up in the ground water or streams because it is not stored or applied correctly. Rules need to be tightened so that these problems don't occur. If it means smaller CAFOs so be it. We only have one earth and limited potable water.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. **Categories:** Green Category

Dear Trade and Consumer Protection,

The nearby CAFO may or may not be impacting my water but I do see that manure is being trucked to every field within less than 1/2 mile of our home. The spreading seems to be outside of the parameters set by the state. Our nitrate levels have increased to the point of needing a reverse osmosis system for drinking water. I also use the filtered water for cooking. I am a good steward of my property yet due to the carelessness of others, my property value is decreased and I must bear the costs of water filtration. Please consider the additional issues listed.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this

issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

Clean water is our gold to a good life. Factory farms are polluters of the environment and promote unhealthy meat. The future is organic livestock management.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Dee Costello

Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

Our greatest problem with Factory Farms is their use of the Liquid Manure System. It contaminates the air (STINKS) and the ground water (neighbors' wells) and waterways and lakes where it causes toxic algae growth. The only acceptable alternative is to Compost the manure. Composting has been very successful where it has been used, and the equipment for mechanization is readily available. We need to make liquid manure illegal, and require all CAFOs to Compost.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dear Trade and Consumer Protection,

Factory farms on animal torture camps. The animals are living under constant stress, filth and abuse. No one should be eating meat from animals raised in that way. The waste is concentrated in pools that pose a risk to our aquifers, especially in areas of karst topography. The smell from CAFOs can gag you from 1/2 a mile away. Wisconsin does not want or need such filth in our state. Keep them out.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

We previously resided in southern door county. When the mega farmers spread their liquid manure it was vile and I believe unsafe for breathing and we lived miles from where they were spreading. Plus these farms are located way too close to Lake Michigan. We need to protect our natural resources especially the Great Lakes. And just as bad is the contamination of our ground Water.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

Dear Trade and Consumer Protection,

there is a strong need for more regulation for the CAFO's throughout WI. I encourage you to come up with standards for disposing manure. the rivers and streams of WI need to be protected.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

As a firm advocate for environmental and animal rights, and as a solely plant based eater, I firmly support stronger restrictions in CAFOs and large animal operations as it is the largest cause of human created climate change which is wreaking havoc on local, national and global scales. I refuse to purchase animal made products and find the idea of allowing them to pollute abominable.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

We must protect one of our most vital resources- water. The proposed changes will keep the playing field level for all the CAFO organizations.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

Please consider carefully the impact of CAFOs on our land, water, health and livestock.. in my opinion they are neither good for people or animals. I am a public health nurse and urge legislation that promotes smaller farms and protects the environment.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Karen Lied

Dear Trade and Consumer Protection,

There are many health reasons I strongly urge you to strengthen rules and oversight of large scale cow and pig farms. Manure leakage into ground water is inevitable and unacceptable. The stress on the animals causes increased cortisol and other stress hormones to be in high levels in the meat, which we then ingest. It is unhealthy for us. Large animal farms smell bad and reduce neighboring home values. Small locally owned, family farms better serve the needs of the community.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

Dear Trade and Consumer Protection,

Every living being should be treated with respect regardless of what we USE it for. Yes USE. That?s what us humans do... we use things to our advantage with no mercy and it?s disgusting. It?s time for a change.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

Our neighbor runs a CAFO on property about a mile and a half from us. When he had 1200 cows we seldom smelled his operation. Now that he has 5,000 cows the smell is constant. Not only that, the 24/7 lights on in his gigantic barn mar our view of the night sky, and even at this distance we hear his equipment (especially sisters backing up) throughout the day and night. We also worry about manure contamination of the groundwater and the several small, local streams that wind throughout the fields he spreads manure on. Because soil can vary so much from one part of the state to another, I think it is imperative that the soil type be taken into account when drawing up siting plans. A "one size fits all" plan is not adequate to protect the groundwater we all rely on. Finally, I believe that a wider radius of neighbors deserves to be notified when CAFO applications are first submitted, so that they have a chance to be involved early in the process.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. Dear Trade and Consumer Protection,

I am against factory farming. I can't list all the possible damage it does, but here are a few.

It is a inhumane way to treat animals.

The concentrated use of antibiotics can produce antibiotic resistant bacteria that can cross over to affect humans.  
Residual antibiotics in meat is harmful

Feed production methods kill the natural composition of the soil.  
Farm fields are bare for long periods of the year supporting no life and sustain heavy erosion. Healthy soil is a system and requires interaction from microbes and insects. Healthy soil holds and purifies water. The soil loses it ability to store carbon when the natural system is destroyed.

Concentrated animals create dead areas that erode, stink and pollute.

The chemicals used to produce feed are poisonous and kill beneficial insects and animals.  
Chemicals used to produce feed are in our water, air and us.

Corporate farming is highly subsidized and discourages small produces that produce healthy food.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Dear Trade and Consumer Protection,

I live in Suamico Wi. Have for 40 years. This summer west winds brought us something new. Strong manure odor. Turns out someone is using the raw liquid manure on a rented farm field in Pulaski. I support property rights and quality of life rights for anyone affected by this practice as well. We have no CFOS here. Just the awful liquid manure.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

Please consider the greater good of all Wisconsin residents. As one of the increasing numbers, I suffer from auto-immune issues and more frequent down days ( as many as weeks of missed work). Our food, water, and air quality have been damned by big industry and mass production and it's affecting our wellness. It's time to address the causes in declining quality of life in Wisconsin.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

The impact of the 3,000 cows facility and now they are going to increase to another 3,000.....has impacted the water quality and water pressure. is it fair for "big" business to have 14 wells!!!!!!!! and take in billions of gallons water for one business? NO! all of the manure is more than the can process and return to the land instead much turns into run off in to the river here.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dear Trade and Consumer Protection,

The issue of CAFOs and pollution is both a property rights issue and an environmental justice issue. It is unacceptable that the most vulnerable groups in society bear the burden of CAFO pollution. These monstrous facilities are hidden from the eye of the public, so many people in Wisconsin are simply unaware of the terrible burden borne by those living in the vicinity of CAFOs. These residents must deal with effects on their health such as respiratory illnesses, and are also at risk of exposure to antibiotic resistant bacteria. Furthermore, they must deal with the decreased property prices and economic difficulties that come with living next to an industrial animal agriculture operation. It is a crime that Wisconsin legislators have allowed this to continue for so long. I view some of the ATCP rule revisions as positive, but these are only the first step in achieving justice for all people in Wisconsin and not burdening our most vulnerable residents to serious pollution.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. Dear Trade and Consumer Protection,

Because I have lived in Wisconsin for my entire life, I remember fishing for trout in Northern Wisconsin before the waters were polluted with animal wastes. I now live in Southern Wisconsin where the trout streams routinely have fish die-offs from too much manure being spread on fields and eventually getting washed into the streams. I want to live where the water is clean enough for the various insects and animals that require clean water, including humans!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

The health of Wisconsin residents and the land on which we live needs to be protected from underregulated CAFOs. The financial burden of ensuring these health and safety rules also needs to be offloaded from small local governments.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Dear Trade and Consumer Protection,

Nothing is more important than keeping our environment, our lands, and our people healthy. This is a stab at that.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

What happened to respecting our neighbors? Getting along and thinking of others and saving the earth for the future.....that is what we are put here to do. God wants us to care for each other and the earth of which we are "stewards". The earth does belong to us!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Susan Manor

Dear Trade and Consumer Protection,

according to who animal husbandry which involves i believe if not billions hundreds of millions of animals if allowed to exist in the future that alone can destroy the earth. so there should be a national policy to get rid of meat production. so i don't care if rules put them out of business. on top of that these cafes are polluting our water supply to boot.////these animals use about 80% of our antibiotics making them useless for human use which means most major medical operations can't be performed. deaths caused by this will be equal to that of cancer.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

Dear Trade and Consumer Protection,

My hometown of Wausau is preparing to build a new, costly water treatment plant. This step represents an enormous investment in providing clean, safe drinking water for the 38,000+ residents of our city. As you know, Wausau is in the rural, north central part of Wisconsin, and is surrounded by farmland. Please help our new water treatment plant do its job to keep our drinking water clean and safe, and make sure that millions of our local taxpayer dollars are not wasted. Also, what of our more rural neighbors in Marathon County who depend on water from their private wells? Don't they deserve clean drinking water and uncontaminated soil? Do all you can to protect all of us from the potential pollution of CAFOs!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Dear Trade and Consumer Protection,

As retired dairy farmers, having had a herd of 38 cows and farming about 200 acres, my husband and I understand the need for farms to be environmentally safe in terms of the ratio of animals to farmable acres. Factory farm animal waste cannot be dealt with safely. Containment will never work. There is too much waste, huge volumes of waste that cannot be managed safely on small acreages.

The inevitable result is always going to be broken and leaking storage facilities and overflow manure volumes that cannot be handled and spread safely over limited acreage. Seepage and leaching of animal waste into the groundwater will always be the result if there are too many animals living in one small area.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

I want to protect our water supply. Without clean and safe water we will get sick and die.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

joseph mcilheran

**Categories:** Green Category

Dear Trade and Consumer Protection,

Animals in large concentrations, are dangerous in too many ways. Should disease strike, the contamination to the site and disposal of unhealthy animals poses numerous health problems which can transmute to human health problems. Of equal importance is the damage to natural resources. Each cow drinks what amounts to a bath tub full of water daily. They also excrete in like amounts. Thousands of penned animals in a static location overwhelm the environment's ability to absorb this generation of waste. Which sets the whole operation open to disease. Not of least concern is fresh water depletion in the aquifer and contamination of local ground water for local population. When I pass larger animal operations in southern Wisconsin, the smell is noticeable winter or summer. This is also a burden for nearby homeowners.

All of the above problems are troubling, but most noteworthy is the possibility of disease and environmental damage. Factory farms are not a responsible consideration for Wisconsin.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 years or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would

create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Dear Trade and Consumer Protection,

ATCP 51 is in serious need of revision. Factory Farms exploit the pre-emption of local control to pollute and damage rural neighborhoods - including groundwater resources. It is time for them to be scrutinized.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Dear Trade and Consumer Protection,

The Department of Agriculture, Trade and Consumer Protection (DATCP) has proposed revisions to the current Livestock Facility Siting Administrative Rule. These changes can help protect our land, water and health. Please support these changes.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Dear Trade and Consumer Protection,

Offal and waste from these factory farms can detrimentally affect people, other animals and the environment. Their location and the practice itself need to be tightly monitored for health and safety standards, as well as for the treatment of those animals being raised there.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

Dear Trade and Consumer Protection,

As a retired public health professional I am concerned about the potential for groundwater pollution from CAFOs. Nitrate levels and bacteria contamination of our groundwater is increasing. The rules for CAFOs need to address these issues.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Dear Trade and Consumer Protection,

My family has farmed for generations. Common sense regulations MATTER - to both farmers and WI residents (note that I did NOT mention corporations). It is imperative that ALL of us protect our water, land, and other natural resources for future generations. We must have fair and science based laws and regulations! Do not put corporate interests above farmers and residents.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Elizabeth Davy

Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. Dear Trade and Consumer Protection,

Wisconsin farming industry is moving from former family farms to large scale operations. Legislation and rules must keep up to protect our water, land and public resources .

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dear Trade and Consumer Protection,

Three years ago, A large CAFO located 20 minutes from our residential Lake Village in SE Wisconsin dumped 600 truckloads of manure on two farm fields right next to subdivisions and between two lakes. The manure was supposed to be injected into the ground but was instead a big mess of manure on top of the fields making it impossible for the residents to be outside their homes due to stench and flies for weeks. The CAFO is producing so much manure that they have to truck it twenty miles away? And subject even more of our state to the environmental hazard that these CAFOS cause!? This is wrong! We need to limit in any way possible the power of these large farms that are putting our health at risk as well as taking over and contributing to the demise of small farmers who farm sustainably. Please take action now

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 years or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. Dear Trade and Consumer Protection,

I just returned from Austria where they have no CAFOs but a national tradition of small farms, including dairy farms, and support of "buy local." With Republican support CAFOs have killed the Wisconsin tradition of small farms, as well as polluted local wells and are a threat to lakes and streams. When are you going to start to protect the people of Wisconsin and our tourism?

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

Last year I drove through much of inland central California, past many CAFO's. I have never seen more inhumane animal environments, it was absolutely horrid, and the stench was almost unbearable.

Some were dairies - destroys the TV ad credibility of "happy cows". Some were slaughter houses. All were devoid of ground cover. The light colored cows' legs and bellies were stained red from urine splatter. In one slaughter field a dead cow laid legs-up, visibly bloated like it was ready to explode, while it's living counterparts were packed in the same field. Absolutely DISGUSTING.

There is no way that operations like this should be allowed to do business. Both for the sake of humane treatment of the animals, and not submitting neighbors to the abhorrent stench these factories generate.

Visit one of these yourself and you will agree.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Michael Conner

Dear Trade and Consumer Protection,

Factory farms make profits for corporations at the expense of the general population. Laws that prevent legal action against CAPO's prevents operation of market checks and balances. If the corporations were held responsible for all costs related to CAPO operations, the profit margin would be slim if not eliminated.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Dear Trade and Consumer Protection,

This matters to me because CAFOs are changing the character of rural life in Wisconsin, and not for the better. They are posing a threat to our clean water, and they are imposing damage to rural roads.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

We don't need factory farms to begin with. Allowing them is a BIG smelly mistake! Too many animals in a small area is not good for the environment OR the animals. I won't buy meat from these operations.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

large farms are producing so much manure that it is polluting the water supply

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Harold Rivard

Dear Trade and Consumer Protection,

Factory Farms have a great potential to protect or to pollute our land, water, and health. As a resident of Fond du Lac I have become aware of the agricultural run-off that is compromising Lake Winnebago. If Factory Farms do not comply voluntarily with protective measures, then strong rules must be passed and enforced.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

Dear Trade and Consumer Protection,

Living near one the smell is horrible. They tear up the roads with their huge equipment and trucks. They are a hazard to the water quality. Liquid manure causes many more problems than the bedded manure of the small family farm. Support the small family farm not CAFO!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

aside from the inhumane treatment of animals in factory-farmed facilities, there is the issue of how damaging factory-farms are to our environment - locals no longer have access to clean water, clean air, etc - secondly (thirdly, really), every factory-farm that is constructed drives more and more of our family farmers out of business - just a bad bad idea all the way around - please do not support the coming of large factory-farms -

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. Dear Trade and Consumer Protection,

We need to protect the availability of clean water. Stronger standards to control how and where large farming operations are located will help limit water contamination via runoff.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Michael O'Loughlin

**Categories:** Green Category

Dear Trade and Consumer Protection,

As a person with farm roots I am very concerned about the number of small farm closures and bankruptcy cases in the past several years. Concentrated farm operations only put more pressure on small family farms.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Dear Trade and Consumer Protection,

Our government officials need to protect the water and small farms in Wisconsin. These large farms are ruining the drinking water, streams, and lakes and forcing small family farms to close. Donations to political parties should not be a factor in deciding what is right for our state. Listen to what the people want. Private businesses should not take precedence over the health and well-being of the citizens of Wisconsin.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

During floods or heavy rainstorms, manure from factory farms could contaminate wells and lakes that supply drinking water.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

In addition to all the environmental problems these CAFOs cause they also are responsible for putting small family farms out of business by lowering milk prices that don't cover the cost of milk production on smaller farm operations.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

As an environmentalist, it is almost unbelievable to me to see how the landscape I knew as a child from Sheboygan is being deteriorated with unhealthy dairy farms producing tons of waste which pollute surrounding farms. There's a moral order here which needs to take into account the damage being done to the animals themselves as well as surrounding farms and to the land, the water and eventually our health. These large farms need to be regulated so I therefore support the proposed changes to the Livestock Facility Siting Rule.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Dear Trade and Consumer Protection,

Land stewardship with justice and equity is extremely important to a well functioning society. When taking care of the land is only done by large mega corporate interests who are only accountable to the profits of shareholders then it follows that only the wealthy will benefit from their control over the vast majority of the land. This is unfair, unwise and unsustainable and it must end. Start giving fair economic subsidies and support to small family organic farmers now!! Stop giving corporate welfare to huge Monsanto-fueled mega farms ! Start giving incentive for young people to consider running their own profitable family farm operations ! Start subsidizing regenerative agriculture, organic farming methods and devote massive public relations, resources and research to these concepts. Most young families I know want to buy organic but find their options are very limited and very expensive. It's high time to create a level and safe, non-toxic playing field. Thank you.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Janice Sieber

Dear Trade and Consumer Protection,

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

Dear Trade and Consumer Protection,

Protect Wisconsin residents from the cascading impacts of concentrated animal feeding operations (CAFOs) on our land, water and health.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

I care about clean water and a healthy environment. Rules and regulations for factory farms should be strengthened. We often think only in the short term. Consider the health of your children and grandchildren. I don't want my groundwater fouled by a corporate farm.

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can

leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

Dave Fields

Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Sincerely,

**Categories:** Green Category

Dear Trade and Consumer Protection,

This matter is important to me for a number of reasons. The first is the health and welfare of animals and the second is the maintenance of the environment. Please protect our animals and our lands. There is only one earth!

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure. Dedicated citizen groups have reviewed nutrient management plans only to discover manure is being spread in areas where landowners are not aware and did not grant permission. Adding this requirement would create added protection for Wisconsin landowners and would ensure that management plans will be implemented. Permittees should be required to show signed contracts for land for manure spreading for land they are renting.

Wisconsin residents are not the only ones at risk, local governments often end up paying the price for CAFO operations. The current permit fee of \$1,000 only scrapes the surface of the potential thousands that local governments could pay to review permits. Green County paying \$40,000 to review a single application reflects a disappointing example of this issue. Additionally, the current rule does not allow local governments to secure financial security, like a bond,, which can leave local governments to clean up the mess in cases of bankruptcy. Local governments should be allowed to require this if they see fit.

Thank you for your time and attention, I look forward to hearing back from you on this important message.

Dear Trade and Consumer Protection,

Concentrated animal feeding operations are a crime. If you visited one of these (if that were even allowed) you'd swear off eating meat. This is not who we are. ??

I am writing to voice my support for some of the proposed changes to the Livestock Facility Siting Rule and to urge you to consider the following recommendations to help protect Wisconsin residents from the known impacts of concentrated animal feeding operations (CAFOs) on our land, water, and health.

The proposed shift to a greater use of setbacks will be a major improvement to the current odor scoring system in protecting the property rights and quality of life for landowners neighboring CAFO operations. Though the rule has some important improvements, they need to be stronger. Replacing the previous system of odor scoring with designated setbacks to determine how far a manure storage facility or barn needs to be from neighboring properties is a big improvement, but there are still some outlets in the proposed rule, including more lenient setbacks if an operation complies with weaker, inexact odor control practices. Additionally, the setbacks need to be much larger and neighbors within two miles of the facilities should be notified. Finally, local governments need to be allowed to require additional setbacks if they deem necessary.

I also support the ability for local governments to impose additional manure spreading restrictions consistent with applicable performance standards and prohibitions in ch. NR 151. Additionally, changes to the rule that only facilities 10 year or older need to be inspected will prove beneficial, as we know there have been storage facilities that have leaked within 30 days of installation. I urge you to make sure that these provisions stay in the rule.

While I do support the above adaptations to the current rule, I'm urging you to add stronger and more robust standards for CAFO operations to protect Wisconsin residents from their potential dangers. For example, the abbreviated review process for facilities expanding by less than 20-30% creates a dangerous loophole that could allow for much bigger, gradual expansion of facilities. It's unfair to not require all facilities, new and expansions, to have to be reviewed.

Another area of concern stems from facility operators not being required to list the properties where they intend to spread their manure.
