

Wisconsin Food Code

Fact Sheet

Food Safety Practices for Handling Cheddar Cheese Curd Displays

In addition to refrigeration, time may be used as a public health control for cheddar cheese curds. Refrigeration or time as a public health control cannot be intermingled. Cheddar cheese curds must either be held under refrigeration or held using time as a public health control.

Fresh Cheddar Cheese Curds

Dairy plants and retail establishments may sell fresh cheddar cheese curds, held out of refrigeration, if:

- The cheddar cheese curds are not held for more than 24 hours from the time of manufacturing.
- The cheddar cheese curds are manufactured according to law.
- The cheddar cheese curds are packaged at a retail food establishment or processing plant.
- The cheddar cheese curds are labeled as specified in [Wis. Admin. Code § 3-602.11](#) with the date or time of manufacture. Cheddar cheese curds marked only with the date must be discarded no later than midnight on the day of manufacture if held at ambient temperature. Those marked with the date *and* time may be held up to 24 hours prior to being discarded if held at ambient temperature.
- If a facility chooses to store cheddar cheese curds at ambient air temperatures using time as a public health control, the cheddar cheese

curds may not at any time be placed back under refrigeration.

- The establishment maintains records indicating the amount of product displayed and the amount of the product discarded for each day that cheese curds are displayed for sale at ambient temperature.
- The cheddar cheese curds in unmarked containers or packages that exceed the 24-hour limit are discarded.
